VIII. Conclusion	31

I. INTRODUCTION AND SUMMARY OF THE ARGUMENT

1. For more than a century, the amateur radio service has served as a proving ground for radio operators, a resource for emergency communications, and a form of goodwill diplomacy between the United States and other nations. A central feature of that service, in the United States and abroad, is the "special event station": an amateur station that temporarily uses a distinctive call sign to mark an anniversary, convention, festival, or other event of public significance.

2. Since 1997, the Commission's rules have permitted U.S. amateur licensees to use special event call signs, but *only* in the exceptionally narrow "1x1" format — a single letter (K, N, or W), a single digit, and a single letter (e.g., "W1A").¹ That 750-combination block was set aside by an order adopted in December 1994,² and the Commission declined to make more call signs available for special events because any additional call signs would have to come from the sequential and vanity call sign systems used for permanent station licensing.³

¹ 47 C.F.R. § 97.3(a)(11)(iii).

² *Amendment of the Amateur Service Rules to Implement a Vanity Call Sign System*, Report and Order, PR Docket No. 93-305, 10 FCC Rcd 1039, ¶ 13 (adopted Dec. 23, 1994) (1995), <https://www.fcc.gov/ecfs/search/search-filings/filing/140347> (last visited Sept. 17, 2026).

³ *Amendments to the Amateur Service Rules Including Amendments for Examination Credit, Eligibility for a Club Station License, Recognition of the Volunteer Examiner Session Manager, a Special Event Call Sign System, and a Self-Assigned Indicator in the Station Identification*, Report and Order, FCC 97-99, WT Docket No. 95-57, 12 FCC Rcd 3804, ¶ 16 (adopted Mar. 20, 1997; released Apr. 1, 1997) (consolidating RM-8301, RM-8418, and RM-8462), <https://www.fcc.gov/ecfs/search/search-filings/filing/180865> (last visited Sept. 17, 2026).

3. In the three decades since, every comparable ITU member administration Petitioner could identify with verifiable primary-source documentation — the United Kingdom, Canada, Australia, Germany, Ireland, and Japan — has adopted special event call sign systems that permit substantially longer, more flexible, and more thematically expressive suffixes than the United States' 1x1 format, while retaining basic safeguards: issuance by the licensing authority and a limited period of use.⁴ The International Telecommunication Union's own Radio Regulations expressly anticipate and authorize this practice: Article 19, No. 19.68A, added at the 2003 World Radiocommunication Conference, provides that "[o]n special occasions, for temporary use, administrations may authorize use of call signs with more than the four characters" otherwise specified for amateur stations.⁵

4. The United States is consequently an outlier. Its special event call sign format is the most restrictive of the administrations surveyed in this Petition, and it is more restrictive than the ITU Radio Regulations require.

5. Petitioner asks the Commission to amend 47 C.F.R. §§ 97.3(a)(11)(iii) and 97.119(d) to add two extended special event call sign formats alongside the 1x1 format. Format (A) keeps the single-letter K, N, or W prefix and uses either one numeral followed by a four- or five-character suffix, or two or more numerals followed by a suffix. Format (B) uses a two-letter prefix of the kind already used in the sequential and vanity call sign systems, followed by two or more numerals and a suffix. Suffixes may mix letters and numerals but must end in a letter, and no extended-format call sign may exceed seven characters. Because no permanent amateur call sign contains more than one numeral or a suffix longer than three letters, these formats cannot duplicate any existing amateur call sign and do not draw on the sequential or vanity call sign pools. The same certified coordinators would administer them under the same limits on duration and reservations that apply to 1x1 call signs today.

⁴ See Section V, *infra*, and sources cited therein.

⁵ ITU Radio Regulations, Article 19, No. 19.68A (added World Radiocommunication Conference 2003).

6. The proposed rule excludes call signs that could be confused with those of other stations or that are otherwise barred: the call sign formats of television and FM broadcast translators, other formats in the Commission's call sign table, combinations barred by the ITU Radio Regulations, and the kinds of call signs the Commission does not assign under its sequential call sign system. It lets a coordinator decline a call sign whose suffix spells obscene or indecent language or that would be false or deceptive identification, applying the standard of 47 C.F.R. § 97.113(a)(4). It also makes the extended formats available for amateur radio contests, whether or not a contest coincides with a special event. Even after the exclusions, the extended formats would provide more than 1.3 billion call signs, compared with 750 in the 1x1 block.

7. The Commission has been asked to consider this before. In 2010, the American Radio Relay League ("ARRL"), the national association for amateur radio, recommended that the Commission take up an expansion of the special event call sign format in a separate proceeding, and the Commission never ruled on that recommendation. Petitioner is not aware of any Commission order rejecting such an expansion on its merits. Adopting the proposed rule would use the flexibility the ITU Radio Regulations already allow and bring U.S. practice into closer alignment with comparable administrations.

II. STATEMENT OF INTEREST OF PETITIONER

8. Petitioner holds an Amateur Extra Class license (N0RC) and is an accredited Volunteer Examiner who helps administer amateur radio license examinations. Petitioner has organized several special event operations using 1x1 call signs and has participated in amateur radio contests. As a licensee, Petitioner is eligible to select a special event call sign under 47 C.F.R. § 97.3(a)(11)(iii) and to use it under § 97.119(d). The current rule directly limits that eligibility in two ways. First, it confines every special event call sign Petitioner may select to the 750-combination 1x1 block, the only format Petitioner has been able to use for the special events Petitioner has organized. A 1x1 call sign's one-letter suffix cannot carry a numeral

marking an anniversary or any word identifying an event, and its limited supply leads ARRL, one of the certified coordinators, to tell requesters that "[b]ecause of the limited number of call signs available," they "are encouraged to limit their requests to the duration of the special event."⁶ Second, it gives Petitioner, as a contest participant, no temporary call sign at all for contest operation unless a contest happens to fall within the dates of a separately qualifying special event.⁶ The rule change proposed here would give Petitioner, and every other U.S. amateur licensee, access to special event call signs that can identify the event being commemorated and to temporary call signs for contest operation, without drawing on the permanent sequential and vanity call sign pools.

III. BACKGROUND: THE CURRENT REGULATORY FRAMEWORK

A. The Amateur Service Call Sign System Generally

9. The Commission's amateur radio call sign systems are set out in 47 C.F.R. §§ 97.3 and 97.19, and are administered under the Commission's general licensing authority in the Communications Act of 1934, as amended, 47 U.S.C. §§ 151–155, 301–609.⁷ Amateur stations are ordinarily assigned "sequential" call signs by the Universal Licensing System, or may apply for a "vanity" call sign under 47 C.F.R. § 97.19, corresponding to formats (referred to in the Commission's public licensing guidance as Groups A through D) tied to the applicant's license class.⁸

⁶ ARRL, *1x1 Special Event Call Signs* (1x1 Special Event Call Sign Assignment Criteria), <https://www.arrl.org/special-event-call-signs> (last visited Sept. 16, 2026).

⁷ 47 U.S.C. §§ 151–155, 301–609; *see also* authority citation to 47 C.F.R. Part 97, 48 Stat. 1066, 1082, as amended; 47 U.S.C. §§ 154, 303.

⁸ 47 C.F.R. § 97.19. The "Group A/B/C/D" terminology is used in the Commission's public licensing guidance (*e.g.*, FCC, *Amateur Call Sign Systems*, <https://www.fcc.gov/wireless/bureau-divisions/mobility-division/amateur-radio-service/amateur-call-sign-systems> (last visited Sept. 16, 2026)) rather than in the text of § 97.19 itself.

B. Origin and Scope of the 1x1 Special Event Call Sign System

10. Separate from the vanity system, 47 C.F.R. § 97.3(a)(11)(iii) defines a "special event call sign system" under which the station licensee selects a call sign "from a list of call signs shown on a common data base coordinated, maintained and disseminated by the amateur station special event call sign data base coordinators," and that call sign "is substituted for the call sign shown on the station license grant while the station is transmitting." The rule fixes the format precisely: the call sign "must have the single letter prefix K, N or W, followed by a single numeral 0 through 9, followed by a single letter A through W or Y or Z (for example K1A)."¹ Section 97.119(d) permits a station, "[w]hen transmitting in conjunction with an event of special significance," to identify using this substitute call sign, provided the station also transmits its assigned call sign at least once per hour.⁹

11. This system originates in two Commission orders. First, in a Report and Order in PR Docket No. 93-305, the Commission set aside the one-by-one call sign block for a special event call sign system, to be addressed in a later proceeding.² Second, in a 1997 Report and Order in WT Docket No. 95-57, FCC 97-99, the Commission codified that reservation into the current rule text and described it as covering "the 750 one-by-one call signs . . . for temporary use by amateur stations during events that are of special significance to the amateur service community."³ The 1997 order also delegated administration of the special event call sign database to Commission-certified volunteer "coordinators" under 47 C.F.R. § 0.131(p).¹⁰ The Commission's stated rationale for confining the format to the 1x1 block was one of scarcity: "we do not have additional call signs to assign for this purpose given that any such call signs would have to be taken from the sequential and vanity call sign systems, thus denying them to amateur operators who want them assigned to their primary and club stations."³

⁹ 47 C.F.R. § 97.119(d).

¹⁰ FCC 97-99, WT Docket No. 95-57, 12 FCC Rcd 3804, ¶¶ 12–16; 47 C.F.R. § 0.131(p); <https://www.fcc.gov/ecfs/search/search-filings/filing/180865> (last visited Sept. 17, 2026).

12. That rationale — a zero-sum competition between special event call signs and the finite pool of sequential and vanity call signs — does not apply to the rule change proposed here. As explained in Section VI, *infra*, the formats this Petition proposes would be administered in the same manner as the existing 1x1 block: they would be temporary and coordinator-issued, and they would not draw down the sequential or vanity call sign pools at all.

C. The Commission Has Already Been Asked to Do This — and Never Ruled on the Request

13. This is not the first time the idea proposed here has been placed before the Commission. In comments filed March 26, 2010, in WT Docket No. 09-209 — a proceeding concerning vanity and club station call sign rules generally — ARRL recommended that the Commission take up, "in a later, separate proceeding, but soon," an amendment to 47 C.F.R. § 97.3(a)(11)(iii) to expand the special event call sign format beyond the single 1x1 block. ARRL grounded that recommendation in the same 2003 World Radiocommunication Conference amendment to ITU Radio Regulations No. 19.68 discussed in Section IV, *infra*, and observed that "[i]t is time to reexamine this program to determine where deregulatory changes can be implemented to increase flexibility in the program."¹¹ The Commission's ensuing Report and Order in that docket, FCC 10-189 (released Nov. 8, 2010), addressed vanity call sign reassignment timing and club station license procedures, but did not address, adopt, or deny ARRL's special event call sign suggestion in any respect.¹² The suggestion

¹¹ Comments of ARRL, the National Association for Amateur Radio, WT Docket No. 09-209, ¶ 22 (filed Mar. 26, 2010), <https://www.fcc.gov/ecfs/search/search-filings/filing/6015544108> (last visited Sept. 17, 2026).

¹² *Amendment of the Amateur Service Rules Governing Vanity and Club Station Call Signs*, Report and Order, FCC 10-189, WT Docket No. 09-209, 25 FCC Rcd 16351 (adopted Nov. 2, 2010; released Nov. 8, 2010) (addressing vanity call sign and club station issues; not addressing special event call signs), <https://www.fcc.gov/ecfs/search/search-filings/filing/6016061773> (last visited Sept. 17, 2026).

appears simply to have gone unaddressed in a docket devoted to other issues, rather than having been considered and rejected on the merits. This Petition formalizes, and requests a ruling on, that sixteen-year-old, previously unaddressed proposal.

14. A fresh Petition for Rulemaking is the appropriate procedural vehicle to obtain that ruling. ARRL's special event call sign suggestion — offered as a passing recommendation for future action within comments on an NPRM concerning other call sign issues — was never itself the subject of a request pending in WT Docket No. 09-209 for the Commission to grant or deny. ARRL did separately petition for reconsideration of FCC 10-189, but it sought reconsideration only of club-station vanity call sign limits; that petition did not raise the special event call sign format, and the Commission's order resolving it did not address that format either.¹³ In denying ARRL's petition, the Commission expressly terminated WT Docket No. 09-209.¹⁴ Nor is reconsideration available today: a petition for reconsideration must be filed "within 30 days from the date of public notice of the final Commission action," 47 C.F.R. § 1.106(f), and that window closed in early 2012. With the docket formally terminated and the reconsideration window closed for over a decade, the appropriate avenue by which the Commission can now be asked to act on the special event call sign proposal is a new petition under 47 C.F.R. § 1.401 — precisely the vehicle Petitioner invokes here.

¹³ *Amendment of the Amateur Service Rules Governing Vanity and Club Station Call Signs*, Memorandum Opinion and Order, FCC 12-1, WT Docket No. 09-209, ¶¶ 1–2 & nn.1–2 (adopted Jan. 3, 2012; released Jan. 11, 2012) (denying American Radio Relay League, Inc., Petition for Partial Reconsideration (filed Jan. 13, 2011), which sought reconsideration only of club station license and call sign limits and did not raise the special event call sign format), <https://www.fcc.gov/ecfs/search/search-filings/filing/0122367005899> (last visited Sept. 17, 2026).

¹⁴ FCC 12-1, WT Docket No. 09-209, ¶ 10 ("IT IS FURTHER ORDERED that proceeding WT Docket No. 09-209 IS HEREBY TERMINATED."), <https://www.fcc.gov/ecfs/search/search-filings/filing/0122367005899> (last visited Sept. 17, 2026).

15. Petitioner notes, in the interest of candor, that ARRL's reconsideration petition also expressed disagreement with the Commission's earlier decision not to adopt a separate ARRL suggestion to increase the number of call signs available in certain sequential and vanity formats generally. The Commission responded that it had "no plans to revisit the issue at this time," but ARRL did not request reconsideration of that point and the Commission's order did not treat it as one.¹⁵ That exchange concerned the availability of combinations within the existing, permanent sequential and vanity formats — the same general topic later raised in the 2017 Alessi petition discussed below — and neither the exchange nor the Commission's response addressed or resolved the distinct question presented here: whether the temporary, coordinator-administered special event system should be permitted additional, longer formats.

16. Petitioner further notes, for the sake of completeness and candor, that the Commission denied one earlier petition for reconsideration of the 1997 order that codified the special event call sign system: a petition filed by David B. Popkin, denied in *Amendments to the Amateur Service Rules*, Memorandum Opinion and Order, FCC 99-84, WT Docket No. 95-57, 14 FCC Rcd 8812 (1999). That petition sought only administrative changes to the special event call sign system — a requirement to identify at the end of a continuous series of transmissions, a fifteen-day maximum duration, a thirty-day interval before reuse of a call sign, codification of first-come, first-served, non-discriminatory, no-charge assignment by the coordinators, and a prohibition on compensation to coordinators for their services. It did not seek, and the Commission's order does not address, any change to the call sign format itself. FCC 99-84 accordingly provides no basis to deny, and is not adverse to,

¹⁵ FCC 12-1, WT Docket No. 09-209, n.10 (noting that ARRL "expresses disagreement with, but does not request reconsideration of, the Commission's decision not to adopt ARRL's suggestions to increase the number of call signs available in certain formats," and that "we have no plans to revisit the issue at this time"), <https://www.fcc.gov/ecfs/search/search-filings/filing/0122367005899> (last visited Sept. 17, 2026).

the format-expansion proposal made here.¹⁶ In declining to limit special event call signs to fifteen days, the Commission also observed that it had not received any complaints that operators were unable to obtain a particular special event call sign because another station was using it for an extended period.¹⁷ That 1999 observation concerned how long individual call signs were held; it did not address whether a one-letter suffix can identify an event, which is the concern this Petition raises.

D. Neither the 2017 Alessi Petition Nor the 2019 Dukish Petition Is Controlling

17. Separately, in 2017, Thomas J. Alessi petitioned to make a new "1××1" format (a letter, followed by two digits, followed by a letter) generally available to Amateur Extra Class licensees as an alternative *permanent, sequential/vanity* call sign format, citing a perceived shortage of desirable 1x2 and 2x1 combinations. The Bureau dismissed that petition by letter, citing the roughly 15 million sequential call signs already available and an unspecified, similarly reasoned petition rejected in 2010.¹⁸ That petition addressed the *permanent* vanity call sign system and a claimed scarcity that the Bureau found factually unsupported — an entirely different rule section and rationale from the one at issue here. It did not address the distinct question presented in this Petition: whether the *temporary*, coordinator-administered

¹⁶ *Amendments to the Amateur Service Rules Including Amendments for Examination Credit, Eligibility for a Club Station License, Recognition of the Volunteer Examiner Session Manager, a Special Event Call Sign System and a Self-Assigned Indicator in the Station Identification*, Memorandum Opinion and Order, FCC 99-84, WT Docket No. 95-57, 14 FCC Rcd 8812 (adopted Apr. 26, 1999; released Apr. 30, 1999) (denying Petition for Reconsideration of David B. Popkin, filed May 1, 1997), <https://www.fcc.gov/ecfs/search/search-filings/filing/070768126613> (last visited Sept. 17, 2026).

¹⁷ FCC 99-84, WT Docket No. 95-57, ¶ 4, <https://www.fcc.gov/ecfs/search/search-filings/filing/070768126613> (last visited Sept. 17, 2026).

¹⁸ Letter from Scot Stone, Deputy Chief, Mobility Division, Wireless Telecommunications Bureau, FCC, to Thomas J. Alessi (Nov. 28, 2017), *reported in* ARRL, *FCC Dismisses Radio Amateur's Petition to Revise Call Sign Rules* (Dec. 2017), <https://www.arrl.org/news/fcc-dismisses-radio-amateur-s-petition-to-revise-call-sign-rules> (last visited Sept. 16, 2026).

special event system, which by design does not compete with the permanent call sign pool, should be permitted additional, longer formats. Petitioner acknowledges that one of the extended formats proposed here, a single-letter prefix followed by two numerals and a letter (for example, K12A), has the same structure Alessi proposed for permanent call signs. That overlap does not revive Alessi's request. The Bureau found no shortage of permanent call signs requiring new permanent formats, and extended-format call signs would be held only temporarily, so the Commission would remain free to revisit the use of those formats if its needs for permanent call signs ever changed. Nor does the 2019 denial of Robert Dukish's petition, RM-11826, apply here; that petition sought an identification-timing exception for emergency nets under § 97.119(a) and did not concern call sign format.¹⁹ Petitioner is not aware of any FCC order denying, on the merits, a request to expand the special event call sign format itself. No reported judicial decision addresses amateur call sign format policy; the only governing authority is the Commission's own orders discussed above.

IV. INTERNATIONAL LAW CONFIRMS THE COMMISSION'S DISCRETION TO ADOPT LONGER SPECIAL EVENT CALL SIGNS

18. The United States' amateur call signs are drawn from international call sign series allocated to it under Appendix 42 to the ITU Radio Regulations (the blocks AAA–ALZ, KAA–KZZ, NAA–NZZ, and WAA–WZZ).²⁰ Article 19 of the Radio Regulations governs how those series may be used.²¹ Two provisions are directly relevant.

19. First, No. 19.38 provides that "[e]ach administration shall choose the call signs from the international series allocated or supplied to it," and expressly excludes call signs

¹⁹ *Robert Dukish*, Order, DA 19-1054, RM-11826 (Wireless Telecomm. Bur., Mobility Div. Oct. 21, 2019), <https://www.fcc.gov/ecfs/search/search-filings/filing/1021265366970> (last visited Sept. 17, 2026), summarized in FCC, *Robert Dukish Rulemaking Petition Decision*, <https://www.fcc.gov/document/robert-dukish-rulemaking-petition-decision> (last visited Sept. 16, 2026).

²⁰ ITU Radio Regulations, Appendix 42, Table of Allocation of International Call Sign Series.

²¹ ITU Radio Regulations, Article 19 (Identification of Stations).

assigned to amateur stations from the notification requirements that apply to other services.²² The ITU accordingly leaves the assignment of amateur call signs, including special event call signs, to each national administration, subject to Article 19's rules on how call signs are formed, discussed below; the Commission need not seek any international clearance to adopt the rule proposed here.

20. Second, and most directly on point, No. 19.68 sets a baseline format for amateur call signs (a one- or two-character nationality prefix, a single digit, and a group of not more than four characters, the last of which is a letter; No. 19.69 exempts amateur stations from the general bar on using the digits 0 and 1). No. 19.68A, added by the 2003 World Radiocommunication Conference, then creates the specific carve-out this Petition invokes: "On special occasions, for temporary use, administrations may authorize use of call signs with more than the four characters referred to in No. 19.68."²³ The Radio Regulations — a binding international treaty to which the United States is a party — thus expressly contemplate and authorize exactly the kind of extended, temporary, special-occasion call sign this Petition requests. The Commission's current 1x1-only rule is more restrictive than international law requires; it is a matter of domestic policy choice, not treaty obligation.

V. COMPARATIVE PRACTICE: OTHER ADMINISTRATIONS ALREADY AUTHORIZE LONGER SPECIAL EVENT CALL SIGNS

21. Exercising the very discretion described above, a number of ITU member administrations comparable to the United States already authorize special event call signs substantially longer and more flexible than the U.S. 1x1 format. Table 1 below summarizes verified practice in six jurisdictions:

²² ITU Radio Regulations, Article 19, No. 19.38.

²³ ITU Radio Regulations, Article 19, Nos. 19.68, 19.68A, 19.69.

Table 1. Comparative Special Event Call Sign Practices in Selected ITU Member Administrations

Country	Regulator	Administration model	Format	Typical duration	Fee
United Kingdom	Ofcom	Issued directly by Ofcom (RSGB advisory only) ²⁴	"GB" (and related) prefixes with 2–3 letter suffixes; an extended "Special SES" format permits longer, numeral-bearing suffixes for major anniversaries (e.g., "GB100XYZ") ²⁴	Limited period set in the Notice of Variation ²⁴	No fee identified

²⁴ Ofcom, *Applying for Special Event Station Notice of Variations Online*, <https://www.ofcom.org.uk/spectrum/radio-equipment/applying-for-special-event-station-notice-of-variations-online> (last visited Sept. 16, 2026); Radio Society of Great Britain (RSGB), *Applying for a Special Event Station* ("Special SES (SSSES). These have additional characters (typically with extra digits) – such as GB100XYZ for a major centenary."; "The NoV will be valid for a limited period."), <https://rsgb.org/main/operating/licensing-novs-visitors/applying-for-a-special-event-station/> (last visited Sept. 16, 2026).

Country	Regulator	Administration model	Format	Typical duration	Fee
Canada	Innovation, Science and Economic Development Canada (ISED)	Issued directly by ISED's Amateur Radio Service Centre, in a four-category system (RIC-9) ²⁵	Special prefixes (e.g., "CG" substituted for "VE") combined with single-letter or four-character alphanumeric suffixes reserved exclusively for special event use ²⁶	2 weeks to 60 days depending on category	CAD \$60.00 per occurrence ²⁷

²⁵ Innovation, Science and Economic Development Canada, Radiocommunication Information Circular RIC-9, *Call Sign Policy and Special Event Prefixes*, Issue 2 (Provisional) (Oct. 2005).

Japan	Ministry of Internal Affairs and Communications (MIC), with JARL support ³³	Licensed directly by MIC to an amateur club that operates the station with the event organizer's consent ³³	"8J" or "8N" prefixes with suffix formats ranging from 2x1 to 2x5 (e.g., "8J2JAPAN" for major national events)	Tied to event period	Standard station licensing fee schedule (no separate memorial-station fee category) ³⁴

³³ Ministry of Internal Affairs and Communications (Japan), Radio Use Portal, *About So-Called Memorial Stations* (いわゆる記念局について) ("A so-called memorial station is an amateur station operated using a special call sign appropriate to an event, by which the event can be commemorated and its significance publicized, and which has considerable public-interest value contributing to increased understanding of amateur radio and its sound popularization and development[;] . . . an amateur station operated for a temporary and provisional purpose in connection with the holding of an event.") (translation by Petitioner), <https://www.tele.soumu.go.jp/j/others/amateur/confirmation/memorial/index.htm> (last visited Sept. 16, 2026); *see also* Japan Amateur Radio League (JARL), *Expo 2025 Special Station Information*, https://www.jarl.org/English/8_info/expo2025.html (last visited Sept. 16, 2026).

³⁴ Ministry of Internal Affairs and Communications (Japan), Hokkaido Bureau of Telecommunications, *Amateur Radio Station Fees* (effective Oct. 1, 2025) (standard new-station license application fee of ¥2,750 (electronic) / ¥4,530 (paper) for stations of 50 watts or less; no separate fee category for memorial (special event) stations, which are licensed under this same general station-license fee schedule), <https://www.soumu.go.jp/soutsu/hokkaido/E/Ama/tesuuryou.htm> (last visited Sept. 16, 2026).

22. Three features of this comparative practice are notable. First, every jurisdiction listed issues special event call signs through an accountable body and limits how long they may be used. The U.S. 1x1 system shares both features, although it relies on Commission-certified coordinators rather than the Commission itself: the coordinators list each call sign on a common database and normally grant it for fifteen days or less.⁶ Second, Petitioner has found no report from any of these jurisdictions that longer special event formats have caused database confusion or misidentification. To the contrary, the United Kingdom's "Special SES" format and Japan's call signs for major national events let the call sign itself communicate the anniversary or event being commemorated — the very flexibility the current U.S. 1x1 format forecloses.

23. Third, some of these administrations give contest operation its own treatment, separate from special event use generally. Australia assigns separate contest call signs, such as VL3A, for 12-month periods, for use only in amateur radio contests,²⁸ and charges a separate reassignment fee for them (AUD \$16, compared with AUD \$36 for a special event call sign).²⁹ Canada handles contests case by case: RIC-9 provides that "[c]ertain annual amateur radio contests may be considered as significant events" eligible for a Category IV special call sign, with eligibility "determined in consultation with the Canadian National Amateur Radio Society."³⁵ The United States has no comparable contest call sign category or contest-eligibility pathway. U.S. amateurs seeking a distinctive call sign for contest operation instead rely on the club station and vanity call sign systems — the same permanent sequential and vanity pool that this Petition's proposed formats are designed not to draw from, *see* paragraph

³⁵ RIC-9, § 2.3 ("Certain annual amateur radio contests may be considered as significant events for which requests for special call signs under Category IV may be approved. Contests for which special event call signs are requested will be considered and their eligibility will be determined in consultation with the Canadian National Amateur Radio Society."), <https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/licences-and-certificates/radiocom-information-circulars-ric/ric-9-call-sign-policy-and-special-event-prefixes> (last visited Sept. 16, 2026).

12, *supra*. Part 97 makes that route available: it permits a club to hold a club station license through a license trustee and to apply for a vanity call sign for that station.³⁶ U.S. contest operators also use the existing 1x1 special event system, but only incidentally: ARRL, one of the Commission-certified special event call sign coordinators, advises that the 1x1 system "[is] not intended for the exclusive ability to have a short call sign during an upcoming amateur radio operating event or contest," although a 1x1 call sign coordinated for a qualifying event "can certainly be used for any Amateur Radio operating purpose during the coordinated time period," including a contest that happens to fall within it.⁶ Petitioner accordingly asks the Commission to make the extended formats proposed in this Petition available for contest operation as well, whether or not a contest coincides with a special event, as discussed in paragraph 29, *infra*.

VI. THE PROPOSED RULE SERVES THE PUBLIC INTEREST AND ALIGNS UNITED STATES PRACTICE WITH THE REST OF THE WORLD

24. The Commission's 1997 order confined special event call signs to the 1x1 block because any additional special event call signs "would have to be taken from the sequential and vanity call sign systems, thus denying them to amateur operators who want them assigned to their primary and club stations."³ In the same paragraph, the Commission also disagreed that "a larger block of special event call signs would be necessary to fully accommodate the demand."³ That 1997 finding concerned whether there were enough 1x1 call signs to meet demand for them. This Petition's concerns are different: a one-letter suffix cannot identify an event, and contest operators have no temporary call sign at all. The scarcity concern that led the Commission to confine special event call signs to the 1x1 block does not apply here. This

³⁶ 47 C.F.R. §§ 97.5, 97.17 (club station eligibility and license trustee requirements), 97.19 (vanity call sign system); ARRL, *Club Station FAQ*, <https://www.arrl.org/club-station-faq> (last visited Sept. 16, 2026); ARRL, *Club Call Signs*, <http://www.arrl.org/club-call-signs> (last visited Sept. 16, 2026).

Petition does not ask the Commission to draw special event call signs from the sequential or vanity pools. It asks the Commission to authorize **separately defined, coordinator-administered extended special event formats** with longer, alphanumeric suffixes, analogous to Canada's four-character special event suffixes and Germany's four-to-seven-character suffixes. Those call signs would be issued and tracked by the same certified special event call sign database coordinators that have administered the 1x1 system without reported difficulty for nearly thirty years,³⁷ and they would be subject to the same hourly identification requirement already codified at 47 C.F.R. § 97.119(d). The change would also advance the purposes Part 97 sets out for the amateur service, including "[r]ecognition and enhancement of the value of the amateur service to the public" and "[c]ontinuation and extension of the amateur's unique ability to enhance international goodwill."³⁸

25. The extended suffix should be permitted to include numerals, not letters alone. ITU Radio Regulations No. 19.68 defines the trailing group of a standard amateur call sign as "not more than four characters, the last of which shall be a letter" — characters, not letters — and No. 19.68A's special-occasion exception removes only the four-character length limit, not that rule on the group's composition.²³ Other administrations already rely on this to let a special event call sign commemorate the occasion numerically: the United Kingdom's extended "Special SES" format produces call signs such as "GB100XYZ," with the anniversary number in the suffix.²⁴ Petitioner therefore proposes that the extended suffix permit any combination of letters and numerals, provided the final character is a letter, as in every other class of amateur call sign. No standard sequential or vanity call sign format (1x2, 2x1, 2x2, 1x3, or 2x3) contains more than one numeral or a suffix of more than three letters. An extended-format call sign therefore cannot duplicate a permanently assigned amateur call sign if it either pairs a single numeral with a suffix of at least four characters or contains two or more

³⁷ See FCC 99-84, WT Docket No. 95-57, ¶¶ 4–5, <https://www.fcc.gov/ecfs/search/search-filings/filing/070768126613> (last visited Sept. 17, 2026).

³⁸ 47 C.F.R. § 97.1(a), (e).

numerals. That same safeguard allows the extended formats to use the two-letter prefixes AA through AL, KA through KZ, NA through NZ, and WA through WZ already used in the sequential and vanity systems (the AA through AL block, for example, is reserved for Amateur Extra Class licensees), and not only the single-letter K, N, or W prefix, so long as every call sign with a two-letter prefix contains two or more numerals. The two-letter prefixes substantially enlarge the pool of available special event call signs without giving up that protection. Finally, Petitioner proposes that no extended-format call sign exceed seven characters in total, which allows suffixes long enough to name an event or anniversary while keeping call signs practical to send, copy, and log.

26. The extended formats³⁹ must also avoid call signs that the Commission's rules and the ITU Radio Regulations reserve or bar for other reasons, and Petitioner proposes four kinds of exclusions. First, format (A) would otherwise reproduce the call signs of broadcast translator stations. A television translator's call sign is the letter K or W, the station's channel number, and two letters (three once the two-letter combinations are exhausted), followed by the suffix -D.⁴⁰ An FM translator's call sign is the letter K or W, the translator's three-digit channel number, and two letters, and an FM translator may identify itself by transmitting that call sign in Morse code.⁴¹ The Commission already writes television translator channel numbers 2 through 9 as two digits "so as to avoid similarities with call signs assigned to

³⁹ The extended formats are set out in full in the proposed rule text in Section VII, *infra*. Format (A) is the single-letter prefix K, N, or W followed by either (i) a single numeral and a suffix of four or five characters, or (ii) two or more numerals and a suffix of one or more characters (for example, K1ANNIV, K1YEARS, or K100A). Format (B) is a two-letter prefix AA through AL, KA through KZ, NA through NZ, or WA through WZ, followed by two or more numerals and a suffix of one or more characters (for example, AA100A or AA25TH). No extended-format call sign may exceed seven characters. In both formats, the suffix may combine the letters A through W, Y, and Z with the numerals 0 through 9, and its last character must be a letter.

⁴⁰ 47 C.F.R. § 74.791(a), (b), (d).

⁴¹ 47 C.F.R. § 74.1283(a), (c).

amateur radio stations,"⁴⁰ and the proposed rule respects that policy by excluding any extended-format call sign in either translator format. Second, the proposed rule excludes any call sign in a format assigned to another class of station under the Commission's call sign table.⁴² Apart from the translator formats, no format in that table can coincide with an extended-format call sign: every other format either contains no numeral, ends in a numeral, or places the letter X immediately after its numeral, while every extended-format call sign contains a numeral, ends in a letter, and never has an X after a numeral. The exclusion keeps the rule correct if the table changes. Third, the proposed rule excludes any combination that ITU Radio Regulations No. 19.46 provides "shall not be used as call signs," namely "combinations which might be confused with distress signals or with other signals of a similar nature" and "combinations in Recommendation ITU-R M.1172-0 that are reserved for the abbreviations to be used in the radiocommunication services."⁴³

27. Fourth, the proposed rule carries over to the extended formats the kinds of call signs the Commission does not assign under the sequential call sign system.⁴⁴ Where that list excludes a prefix only in a particular standard format, such as the 2-by-3 format, the proposed rule applies the exclusion to extended-format call signs with the same prefix and the same suffix length, treating the suffix as the characters that follow the numerals after the prefix. The proposed rule accordingly excludes call signs with the prefix AA through AL, NA through NZ, WC, WK, WM, WR, or WT and a three-character suffix; call signs with the prefix KP, NP, or WP followed by the numeral 0, 6, 7, 8, or 9, at every suffix length, because the list applies that exclusion to every standard format with those prefixes; and call signs beginning with KA2 through KA9, KC4, KC6, KG4, KL9, or KX6. For SOS, the Q-code combinations QRA

⁴² 47 C.F.R. § 2.302.

⁴⁴ FCC, *Amateur Call Sign Systems*, Call Sign Availability ("The following call signs are not available for assignment"), <https://www.fcc.gov/wireless/bureau-divisions/mobility-division/amateur-radio-service/amateur-call-sign-systems> (last visited Sept. 16, 2026).

through QUZ, and the letters EMA that the Commission reserves for Federal Emergency Management Agency stations with the prefixes AF, KF, NF, and WF, the proposed rule goes further than the list, which excludes them only as the entire suffix: it excludes any call sign that contains them, because a longer suffix could otherwise embed them (for example, K10SOSA). The list's remaining entries are already excluded by the extended formats themselves, which never use the prefixes AM through AZ, the letter X in the suffix, or the 1x1 form. With these exclusions, an extended-format call sign cannot duplicate any amateur call sign or any call sign in a format that § 2.302 or the broadcast translator rules assign to another class of station. Some format (A) call signs beginning with N, such as N10A, contain the same characters as aircraft registration numbers. Aircraft stations, however, identify by the type of aircraft followed by those characters without the letter N, and existing N-prefix 1x1 and 1x2 amateur call signs such as N1A and N1AB already match registration numbers in the same way, so Petitioner does not propose excluding them.⁴⁵ Format (B)'s two-letter prefixes also reach combinations, such as KL, KH, and KP, whose second letter § 97.19(d)(4) reserves for Alaska, Hawaii and the Pacific Insular Areas, and the Caribbean Insular Areas, respectively. Rather than exclude those combinations from the extended formats, the proposed rule carries over the same geographic-eligibility condition that already governs them in the sequential and vanity call sign systems: a licensee may select an extended-format call sign using one of those prefixes only if the licensee's mailing address is in the corresponding territory. This preserves those call signs for event organizers in Alaska, Hawaii, the Pacific Insular Areas, and the Caribbean Insular Areas, rather than making them generally available and thereby suggesting a territorial association a station does not have. The pool remains very large. The 1x1 block contains 750 call signs.³ In all, the extended formats would make 1,325,710,710 call signs available after these exclusions, more than 1.7 million times as many, and call signs of five or

⁴⁵ 47 C.F.R. § 87.107(a)(2); 14 C.F.R. § 47.15(b).

fewer characters alone would number 363,000, or more than 480 times the size of the entire 1x1 block (Table 2).⁴⁶

Table 2. Call Signs Available Under the 1x1 Format and the Proposed Extended Formats, After Exclusions

Total length (characters)	1x1 format	Proposed format (A)	Proposed format (B)	Total, proposed formats
3	750	—	—	—
4	—	7,500	—	7,500
5	—	137,500	218,000	355,500
6	—	27,619,680	7,630,000	35,249,680
7	—	1,116,468,450	173,629,580	1,290,098,030
Total	750	1,144,233,130	181,477,580	1,325,710,710

28. Longer suffixes raise one issue the 1x1 format never did: a suffix of four or more characters can spell a word. The rules for sequential and vanity call signs do not address this

⁴⁶ Petitioner's calculation from the proposed rule text in Section VII, *infra*, after subtracting every call sign excluded under items (1) through (8) of that text; each call sign is subtracted once even if more than one exclusion applies. Beyond SOS and the Q-code combinations QRA through QUZ, no combinations are subtracted under ITU Radio Regulations Nos. 19.47 and 19.48. Each character after the prefix and the required numerals may be any of 35 symbols (the 25 letters A through W, Y, and Z, and the 10 numerals 0 through 9), and the final character must be one of the 25 letters. Format (A) uses the 3 prefixes K, N, and W. Format (B) uses the 90 two-letter prefixes AA through AL (12), and KA through KZ, NA through NZ, and WA through WZ (26 each). Call signs that satisfy both alternatives within format (A) are counted once. Because no extended-format call sign may exceed seven characters, Table 2 covers every permitted length. Table 2 does not subtract call signs that a coordinator may decline under paragraph 28, *infra*, or that the geographic-eligibility condition discussed above limits to licensees in a particular territory; that condition restricts who may select certain format (B) call signs, not how many exist. The 1x1 figure (3 prefixes × 10 numerals × 25 letters) matches the Commission's own count of "750 one-by-one call signs." See note 3, *supra*.

either, even though their suffixes of up to three letters can also spell words, but longer suffixes make the problem considerably more likely. Part 97 already prohibits an amateur station from transmitting "obscene or indecent words or language" or "false or deceptive messages, signals or identification,"⁴⁷ and a station transmits its special event call sign each time it identifies. The special event call sign coordinators, however, have no express authority to decline a call sign because of what it spells. The rules charge them with coordinating, maintaining, and disseminating the common database,⁴⁸ and the Commission has described their role as reserving a call sign for the requester "if it is available," on "a first-come, first served, non-discriminatory basis."⁴⁹ The coordinators' published criteria concern the purpose and timing of the event: ARRL⁶ and W4VEC⁵⁰ both limit special event call signs to publicly significant events and to periods of no more than fifteen days, and W4VEC notes that coordinators "have wide latitude in the acceptance, rejection or cancellation of 1x1 call sign reservations."⁵⁰ None of those criteria addresses what a call sign spells. Petitioner therefore proposes that a coordinator may decline to list an extended-format call sign whose suffix spells obscene or indecent words or language, or whose use would be false or deceptive identification, such as a suffix that imitates a government agency. Because all coordinators share one database, a call sign declined by one coordinator on that basis could not be listed by another. The standard is deliberately narrow: it applies the restriction § 97.113(a)(4) already places on every amateur licensee and otherwise leaves the coordinators' role as the Commission has described it.

29. The extended formats should also be available for amateur radio contest operation, whether or not the contest coincides with an event of special significance. This would not

⁴⁷ 47 C.F.R. § 97.113(a)(4).

⁴⁸ 47 C.F.R. §§ 0.131(p), 97.3(a)(11)(iii).

⁴⁹ FCC 99-84, WT Docket No. 95-57, ¶ 6, <https://www.fcc.gov/ecfs/search/search-filings/filing/070768126613> (last visited Sept. 17, 2026).

⁵⁰ W4VEC Volunteer Examiners Club of America, *1x1 Call Signs*, <https://w4vec.org/1x1.html> (last visited Sept. 16, 2026).

create a separate call sign category. It would be a permitted use of the same extended-format call signs, listed on the same common database, available even when the licensee's only purpose is to operate in a contest. Other administrations already provide call signs for contest operation: Australia assigns contest-only call signs for 12-month periods,²⁸ and Canada allows certain annual contests to qualify for a special call sign.³⁵ This proposal goes further than Canada's, which is limited to certain annual contests, but the duration and reservation limits discussed below keep contest use temporary. In the United States, by contrast, a special event call sign may be used in a contest only incidentally, when the contest happens to fall within the dates of a separately qualifying special event.⁶ An operator who wants a distinctive call sign for a contest itself typically obtains a permanent club or vanity call sign, often through a club formed for that purpose, drawn from the same sequential and vanity pools that the Commission's 1997 order sought to protect. Contest use of the extended formats would not draw on those pools at all because, as shown in paragraphs 25 through 27, *supra*, no extended-format call sign can duplicate a permanently assigned amateur call sign or a call sign in a format assigned to another class of station. Nor does international law stand in the way. No. 19.68A permits longer call signs "[o]n special occasions, for temporary use,"⁵ and nothing in its text confines "special occasions" to commemorative events; a contest with published rules and a fixed operating period is a special occasion, and a call sign held only for that period is a temporary use. The limits the coordinators apply to 1x1 call signs today would apply equally to contest use: a call sign is needed "for 15 days, or less"; "[a]mateurs may not reserve multiple bordering 15 day periods"; and "[r]eserving more than one 1x1 call sign during a calendar year is discouraged."⁶ Those limits keep a licensee from holding an extended-format call sign for every contest weekend. An extended-format call sign used for a contest would be entered on the coordinators' common database for the contest's operating period only, and the station would continue to transmit its assigned call sign at least once per hour under 47 C.F.R. § 97.119(d).

30. Adopting such a rule would:

- a. Bring United States practice into closer alignment with the United Kingdom, Canada, Australia, Germany, Ireland, and Japan, each of which already permits longer, more descriptive special event call signs administered under comparable safeguards;
- b. Exercise, rather than fall short of, the flexibility the ITU Radio Regulations already extend to member administrations under No. 19.68A;
- c. Allow U.S. amateur clubs and event organizers to select call signs that meaningfully identify the anniversary, exposition, or commemorated event — for example, a call sign incorporating an anniversary number, as the United Kingdom's "Special SES" format allows — improving public recognition and outreach value of the amateur service;
- d. Let U.S. contest operators use a temporary, distinctive call sign for a contest's operating period, even when no special event is involved, without forming a club or taking a permanent call sign out of the sequential and vanity call sign systems; and
- e. Require no change to the existing sequential and vanity call sign systems or the existing 1x1 special event system; the certified coordinators would extend their existing databases to track the extended formats and apply the exclusions and standard described in paragraphs 26 through 28.

VII. PROPOSED RULE TEXT

31. Petitioner proposes that the Commission amend 47 C.F.R. §§ 97.3(a)(11)(iii) and 97.119(d) as follows (new text underlined; this is illustrative proposed text for the Commission's consideration and further refinement in a Notice of Proposed Rulemaking):

§ 97.3 Definitions.

(a) * * *

(11) * * *

(iii) *Special event call sign system.* The call sign is selected by the station licensee from a list of call signs shown on a common data base coordinated, maintained and disseminated by the amateur station special event call sign data base coordinators. The call sign must have the single letter prefix K, N or W, followed by a single numeral 0 through 9, followed by a single letter A through W or Y or Z (for example K1A), or, at the option of the licensee, either of the following extended formats:

(A) The single letter prefix K, N or W, followed by either (i) a single numeral 0 through 9 and four or five characters consisting of any combination of the letters A through W, Y, or Z and the numerals 0 through 9, the last of which shall be a letter (for example K1ANNIV or K1YEARS), or (ii) two or more numerals 0 through 9 and one or more characters consisting of any combination of such letters and numerals, the last of which shall be a letter (for example K100A); or

(B) A two-letter prefix AA through AL, KA through KZ, NA through NZ, or WA through WZ, followed by two or more numerals 0 through 9, followed by one or more characters consisting of any combination of the letters A through W, Y, or Z and the numerals 0 through 9, the last of which shall be a letter (for example AA100A or AA25TH). No extended-format call sign may exceed seven characters in total.

A call sign in an extended format may not be selected if it:

(1) consists of the letter K or W followed by two numerals and two or three letters, or by three numerals and two letters (the formats of television and FM broadcast translator call signs under §§ 74.791 and 74.1283 of this chapter);

(2) is in a format assigned to any other class of station under § 2.302 of this chapter;

(3) is a combination that shall not be used as a call sign under No. 19.46 of the ITU Radio Regulations;

(4) contains the letters SOS or any of the letter combinations QRA through QUZ;

(5) has the prefix AF, KF, NF, or WF and contains the letters EMA;

(6) has the prefix KP, NP, or WP followed by the numeral 0, 6, 7, 8, or 9;

(7) begins with KA2 through KA9, KC4, KC6, KG4, KL9, or KX6; or

(8) has the prefix AA through AL, NA through NZ, WC, WK, WM, WR, or WT and a suffix of three characters.

A call sign in an extended format that uses a prefix designated under the sequential call sign system for Alaska, Hawaii, the Caribbean Insular Areas, or the Pacific Insular Areas may be selected only by a licensee whose mailing address is in the corresponding state, commonwealth, or island, consistent with § 97.19(d)(4) of this chapter.

A special event call sign data base coordinator may decline to list an extended-format call sign whose suffix spells obscene or indecent words or language, or whose use would be false or deceptive identification. A call sign declined on that basis may not be listed by any coordinator.

For purposes of this paragraph, the suffix of an extended-format call sign is the group of characters that follows the numeral or numerals immediately after the prefix. Extended-format call signs are subject to the same limits on duration and availability as call signs in the 1x1 format, and to such further limits as the Commission may by Public Notice prescribe. A call sign in an extended format may also be used in conjunction with an amateur radio contest, whether or not the contest coincides with an event of special significance, for the operating period of that contest as shown on the common data base.

The special event call sign is substituted for the call sign shown on the station license grant while the station is transmitting. The FCC will issue public announcements detailing the procedures of the special event call sign system.

§ 97.119 Station identification.

(d) When transmitting in conjunction with an event of special significance or, for a call sign in an extended format authorized under § 97.3(a)(11)(iii), an amateur radio contest, a station may substitute for its assigned call sign a special event call sign, in any format authorized under § 97.3(a)(11)(iii), as shown for that station for that period of time on the common data base coordinated, maintained and disseminated by the special event call sign data base coordinators. Additionally, the station must transmit its assigned call sign at least once per hour during such transmissions.

32. Petitioner defers to the Commission and its certified special event call sign coordinators on implementation details, including the seven-character maximum, the exclusions and the standard for declining call signs described in paragraphs 26 through 28, *supra*, database mechanics, and any transition period. Petitioner likewise defers on how "amateur radio contest" should be defined for this purpose (for example, an operating event with published rules and a fixed operating period) and on whether the same extended-format call sign may be reserved for the same contest in successive years. Petitioner welcomes a Notice of Proposed Rulemaking inviting comment on these questions.

VIII. CONCLUSION

33. For the foregoing reasons, Petitioner respectfully requests that the Commission institute a rulemaking proceeding to amend 47 C.F.R. §§ 97.3(a)(11)(iii) and 97.119(d) to authorize additional, longer special event call sign formats that may be used for special events

and for amateur radio contests, whether or not a contest coincides with a special event, as set forth above. Adopting the proposed rule would let U.S. amateur clubs and event organizers select call signs that meaningfully identify the events they commemorate, give contest operators a distinctive temporary call sign without drawing on the permanent sequential and vanity call sign systems, and advance the amateur service's public recognition and outreach value and its role in fostering international goodwill — all while using the flexibility the ITU Radio Regulations allow and bringing United States practice into alignment with that of comparable foreign administrations.

Respectfully submitted,
